

Check Capture

Capture21.Org recognizes the growing trend of check imaging and the efficiencies provided by Check21 legislation and has developed a simple, easy to use, hosted solution for credit unions.

Mobile

What sets **Capture21.Org's** Mobile Capture apart is our solution allows members the ability to fully process a check without a server connection. Our software actually resides client-side on the phone or tablet. Creating a file of only 25KB, while other products can be 500KB to 3MB, allows for a faster and less expensive deposit than any other mobile deposit solution.

Branch

With **Capture21.Org**, the credit union will be able to capture and balance items at either the branch and or main office location. Intelligent Character Recognition (ICR) along with CAR/LAR ensures minimal manual keying of data is required. All of this is done at United Solution's secure datacenter and we configure Capture21.Org with the appropriate modules to meet the needs of the individual credit union.

Merchant

With **Capture21.Org** Merchant Capture, merchants will be able to prepare their deposit just as if they were walking into a branch. The merchant will then run our software, enter the amount of the deposit, scan the checks, and click the export button. Merchants are not required to key in any information about the checks, this will be done at the Datacenter.

ATM

Combined with an image enabled ATM, **Capture21.Org's** ATM Capture provides a solution that allows for the image capture of a check deposit transaction at the ATM. **Capture21.Org's** ATM Capture enhances your member's experience by providing convenient access to their accounts and providing the ability to make deposits around the clock.
