

## IT Management

Does your host-provided network connection offer you the peace of mind and stability of a streamlined and solid solution that is scalable and reliable? Network Services for Credit Unions from United Solutions Company does because it provides a full suite of prioritization services from real-time data to standard network traffic. It is designed to give your credit union a scalable solution based on the applications and services required by your organization.

United Solutions Company can customize an private network solution to fit a small credit union or give a larger credit union the bandwidth it needs to meet expanding expectations. A core network will provide a resilient, latency-free solution that identifies trouble spots in the credit union's infrastructure and re-routes data packets to a more data-sustainable segment of the network – all without any impact to member service.

Site Specific Network Services offers simple, peace-of-mind options for credit unions that want around-the-clock management and monitoring with services that meets their needs. Well designed network services provide flexibility and expandability to the credit union's capabilities well into the future.
