**SKIP-A-PAY**

United Solutions

## Make Skip-A-Pay a breeze with United Solutions Company's newest software.

United Solutions Company developed an affordable Skip-A-Pay software for financial institutions that is member-driven, improves revenue, and best of all, is largely automated to bring relief to financial institutions' staff.

1 United Solutions works with your credit union to determine loan skip eligibility. You decide the criteria regarding which members and loan products can be skipped. This member pre-approval is uploaded daily.

2 United Solutions provides a URL to be applied to the credit union's website so your members can login and select the loans they would like to skip.

3 A file of those members who elected to skip is uploaded into DataSafe or XP2 Systems and processed. The core products will post the fee, bump the due dates, and change loan payment distribution dates.

Features Include:

User Admin — Create and control user accounts for your organization's staff to have administration access.

Set Messages — Update specific messages that are being displayed to your customers.

Skip Requests — Review loan skip requests and update which requests are approved or denied with automatic notification to the customers.

Reports — Generate reports for loans that are requested to be skipped to generate CSV files that can be imported to spreadsheet softwares.
